List of Acronyms

API Application Programming Interface

GUI Graphical User Interface

1 Introduction

This is a sample document to demonstrate the capabilities of `tex2docx`. It includes a title page, table of contents, acronyms, TikZ figures, and a bibliography.

1.1 Acronyms

Here we use some acronyms. The Application Programming Interface (API) allows different software components to communicate. Users interact with the system through the Graphical User Interface (GUI). We can also use plural forms like APIs.

2 TikZ Diagrams

One of the main features is converting TikZ diagrams into high-resolution images. Below is a simple block diagram.

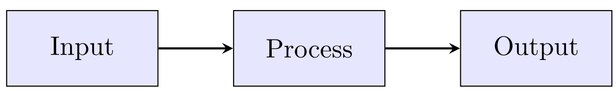

Figure 1: A simple process diagram.

3 Equations

Standard LaTeX math environments are fully supported and converted seamlessly into Word equations.

Here is an inline equation: $E = mc^2$. And here is a block equation:

$$f(x) = \int_{-\infty}^{\infty} \hat{f}(\xi)\, e^{2\pi i \xi x}\, d\xi \tag{1}$$

You can also use aligned equations:

$$a^2 + b^2 = c^2 \tag{2}$$

$$\sin^2\theta + \cos^2\theta = 1 \tag{3}$$

4 Formatting

Standard LaTeX formatting is preserved:

- **Bold text** for emphasis.
- *Italic text* for terms.
- URLs like `https://github.com/scavero/tex2docx`.

5 Conclusion

This tool makes it easy to convert LaTeX to Word, especially when using complex packages like TikZ. For more details, see [1].
